AIR FORCE RESERVE

AFRC Commercial Mobile Devices

Apple iOS / iPadOS Desktop Anywhere (Horizon View)

Desktop Anywhere requires a device enrolled on AFRC Workspace One UEM (Airwatch) as CAC Derived Certificates are installed via Purebred which requires a NIPR (VPN) connection. Please refer to the CMD Onboarding Tri-Fold

All Mobile Device users shall complete the DoD Mobility Training at https://cyber.mil/training/dod-mobile-devices/ and complete an AF Form 4433 – User Agreement prior to device usage.

Installing Horizon View

1. The Horizon View application should install automatically to your devices using Device Based License Allocations. If the app is not available on your device home screen launch the **AFRC App Store** Link and select **install**.

Note: Horizon View Application must be installed as a managed app on the device to ingest Purebred Credentials.

Adjusting Horizon View Settings

1. Launch Horizon View from device Home Screen
2. Select '**Settings'** from bottom menu pane
3. Select '**Resolution'** and Turn **off** '**Hi Res Mode'** then go back
4. Optional: Select '**Touch'** and turn off '**Native Windows Touch Gestures**' if using attached mouse and keyboard
5. Optional: Select '**Presentation Mode'** and turn **on** if device is connected to an external monitor (This turns the device into a trackpad and keyboard while displaying Windows SDC on a monitor
6. Select '**VMWare Blast'** and ensure '**H.264'** is **ON**
7. Optional: Select '**Cellular Data Warning'** and turn **OFF** to disable warning prompt

AIR FORCE RESERVE

Creating a Virtual Smartcard

1. Launch Horizon View from device Home Screen
2. Select '**Settings'** from bottom menu pane
3. Select '**Use Derived Credentials'**
4. Select '**Create New Virtual Smart Card'**
5. Enter Device Passcode, FaceID or TouchID
6. Enter a **6 – 8 digit Pin**, re-enter, then select '**Continue'**
7. Select 'PIV Auth Cert'
8. Select **< Browse**, then Select '**Purebred Key Chain'**
9. Select '**Purebred PIV Auth Cert'**, then '**Import Key'**
10. Repeat for the **Signature** and **Encryption** Certs
11. Note the **Labels** for the next two certs
    a. **Signature**: Purebred Digital Signature Cert
    b. **Encryption**: red.hound.purebred.pkcs12
12. Verify **3 checkmarks** next to all Certificate categories
13. Select '**Done'**
14. Virtual Smart Card (Last.First.MI.EDIPI) is then available

Configuring Horizon View DA Server

1. Launch Horizon View App from Home Screen
2. Select '**Servers'** from bottom pane
3. If server is not prepopulated by MDM select '**New'**
4. Enter the server address '**afrcdesktops.us.af.mil'**
    a. HQAFRC staff will use different server
5. Enter '**Server Description**'
6. Select '**Connect'**

Optional Human Interface Devices (HID) / Peripherals

Keyboards

- Brydge
- Zagg (Messenger, Rugged, Pro Keys)
- Logitech (Folio, Combo, Rugged)
- Apple Magic Keyboards
- Belkin

Mice / Trackpads

- SwiftGT Mouse
- Apple Magic Mouse 2 / Trackpad 2

Headsets

- Any phono jack wired earbuds with mic
- Jabra headsets
- Apple AirPods / Airpods Pro

Stylus

- Apple Pencil 1G / 2G

AFRC does not endorse any of the products above, the non-inclusive list includes items tested and approved.

AIR FORCE RESERVE

Display Adapters

Wired

- **Apple Certified MFi Adapters**
    - Lightning to DVI
    - Lightning to HDMI
    - Lightning to VGA
    - Lightning to DP (Display Port)

For newer iPad Pros and Airs w/ USB-C port

- DVI to USB-C Cable
- HDMI to USB-C
- Apple USB-C Digital AV Adapter

Wireless

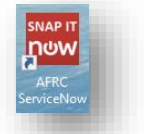

- **Airplay 2 devices**
    - Newer Smart TVs
    - Apple TVs

AFRC does not endorse any of the products above, the non-inclusive list includes items tested and approved.

Connecting Peripherals

1. Go to Device Settings
2. Select '**Bluetooth'** in left pane
3. Turn on 'Bluetooth' then follow manufacturer instructions

Incident Tickets

After exhausting self-help (Tier 0) and local Tier 1 support via their local support or Facebook AFRC Horizon View Site, end users may submit a trouble ticket via the AFRC ServiceNow Link on their devices or at https://snap.area52.afnoapps.usaf.mil/sp/

Incident tickets should use the following selections when asked how you are connecting or accessing the network:

- AirWatch
- Desktop Anywhere
- VPN

For a guided video on your Desktop Anywhere configuration on an iOS device, use your QR reader app to scan the QR on the left and view the video on YouTube.

Setting Up an External Keyboard

Horizon Client detects the iPad Keyboard Dock external keyboard automatically.

To use the Apple Wireless Keyboard (Bluetooth) with a remote desktop or published application, pair the keyboard with the iPad. To make the iPad detect the wireless keyboard, tap the screen with three fingers at the same time, or tap the **Keyboard** button in the Horizon Client Tools. Do not use the onscreen keyboard in split keyboard mode when you attempt to make the iPad detect the Apple Wireless Keyboard (Bluetooth) keyboard.

After the iPad detects the Apple Wireless Keyboard (Bluetooth), you cannot use the Horizon Client Tools or three-finger tap to display the onscreen keyboard. To use these features, deactivate the external keyboard by pressing its Eject key.

Using a Mouse on an iPad

With iPadOS 13.4 and later, you can use an external mouse with remote desktops and published applications. Both Bluetooth and USB mice are supported.

For the Apple Magic Mouse and Apple Magic Trackpad, use second generation or later devices only. The first-generation devices are not fully supported.
For left-handed users, follow these recommendations.

- If left-handed mode is enabled in the remote desktop, always enable the **Left Handed Mode** option in Horizon Client. See Configure Horizon Client to Support Reversed Mouse Buttons.
- To use left-handed mode with a physical mouse, configure left-handed mode in the iPad settings. You must use the iPad settings regardless of whether left-handed mode is enabled in the remote desktop.

https://docs.vmware.com/en/VMware-Horizon-Client-for-iOS/2012/horizon-client-ios-user/GUID-FE9FD995-0B7A-4A7E-9A72-EB00A4B937B5.html

Troubleshooting Steps and Common issues

Issue: Horizon View expects to get your credentials from….
Fix: Incorrect Certificates imported from Purebred. Ensure your Purebred Agent provided you with the **PIV Certificate**, rather than the Identity Certificate

AIR FORCE RESERVE

Issue: Outlook Email encryption issues (conflicts between thin client CAC certs and DA Purebred Certs)
Fix: Republish your certificates in Outlook Security Settings - GAL

Issue: iPad/iPhone display not showing trackpad and/or keyboard while logged into DA and connected to external monitor.
Fix: Go to Horizon View Settings and Turn Presentation Mode On

CAC Replacement Actions

1. Turn on Purebred Reset option by going to **Settings** -> **Purebred Registration** -> Turn on '**Show Reset Button**'
2. Launch Purebred App, then select '**Reset Purebred**'
3. Type in '**YES**' then '**Continue**'
4. Provide device serial number to Purebred Agent to revoke old certificates
5. Launch PIV-D app
6. Enter passcode
7. Select '**Settings**'
8. Select '**Account**'
9. Select '**Re-Issue Derived Credentials**'
10. Select '**Okay**' at the Clear Credentials prompt
11. Complete the **Purebred / PIV-D – CAC Cert Install** instructions again from the AFRC CMD Onboarding Tri-Fold
12. Complete the **Creating Virtual Smartcard** instructions again
