

Enterprise messaging platform

CAO: 20210119, 312 AS

Overview

- This guide will help you get up and running with Mattermost.
- Access to unencrypted NIPR (.mil) email **AND** Two Factor Authention (ex. Google Authenticator) is required for account setup.
- The four topics covered are:
  - Mattermost Setup (first time setup)
  - Mattermost App Setup
  - Mattermost Quick Tips
  - Troubleshooting

Overview

- What is Mattermost (MM)? It's a secure collaboration tool that can be accessed through a web browser, or app (Android and iOS) on your personal and government devices. This tool has received a Defense Information Systems Agency (DISA) Provisional Authorization which allows FOUO/PII/CUI in private channels and direct messages. This is known as Information Level 4 (IL4).
- The 349 AMW has its own workspace in MM. Once you accomplish the registration steps, you can then add pertainant channels. Channels are private areas that have been set up for various groups and squadrons. They are private and should be limited to individuals in our unit.
- Why use MM? Because you don't have to VPN from a government laptop to access. MM provides a message board-like graphical user interface, but also provides the ability to send files through direct messages. Other features/integrations such as video conferencing are rapidly being tested and fielded. Please take necessary security and protection precautions when saving files especially to your personal computers. If you're on the go, you can utilize the app available in the Apple Store or Android equivalent. Enjoy your increased team productivity!

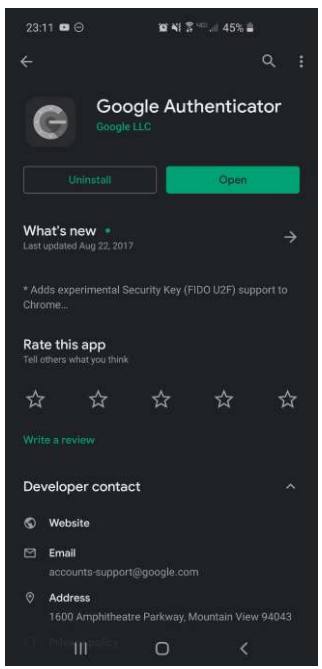

Mattermost Setup

Account creation and initial setup

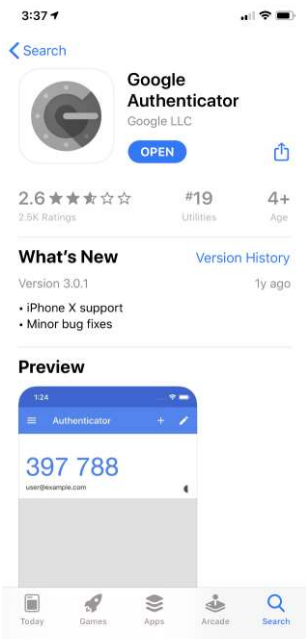

Mattermost Setup

1

Install Google Authenticator* app for either Android or iOS on your phone

GET IT ON Google Play

Download on the App Store

*Or any Time-based One-time Password (TOTP) app (e.g. 1Password, Authy)

Mattermost Setup

We suggest creating your account without using your CAC card the first time.

If you are using a work computer or personal computer with your card, a CAC card window will pop up, click Cancel to continue the setup using username password.

During setup, you will need access to your .mil email at least once to confirm your account.

We suggest using Chrome if possible.

Associating your account with your CAC is very easy later in the process.

Mattermost Setup

2 From your computer, visit:

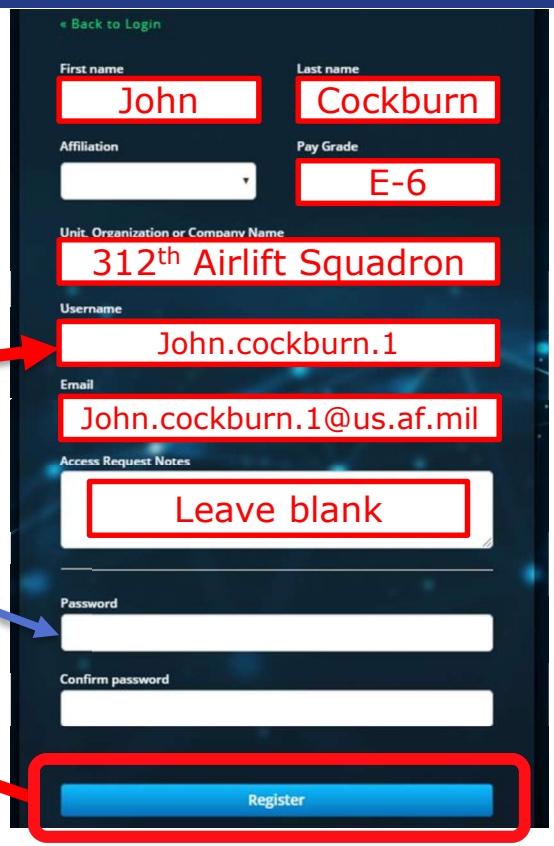

https://login.dsop.io/

For TAFB
Your UserName NEEDS to match your email prefix
My email is john.cockburn.1@us.af.mil
So my username is john.cockburn.1

12 Character Password: Upper, Lower, Number and 2x Symbols

3 Enter your information, and click "Register".

Note: You must use your .mil email

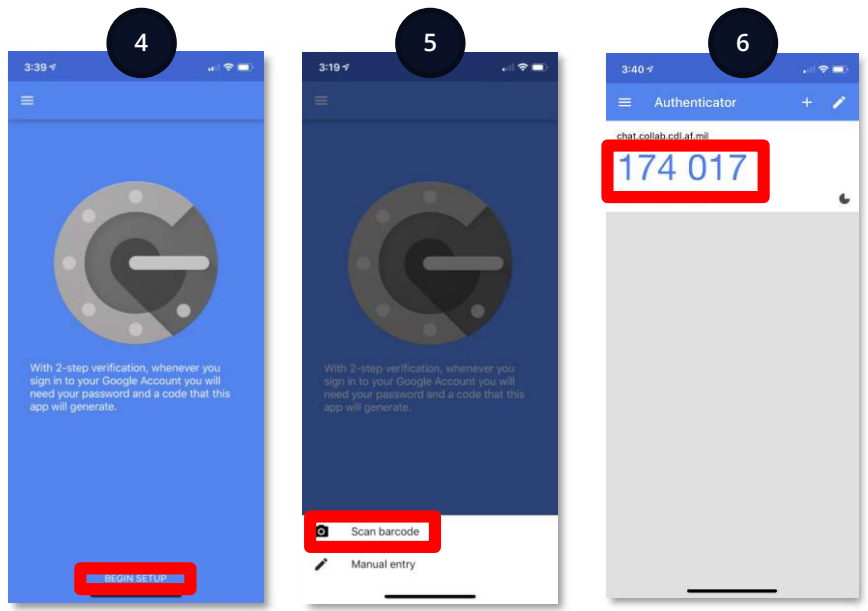

Mattermost Setup

4. Open the Google Authenticator app. Click “Begin Setup”.

5. Click “Scan a barcode”.

6. Point the phone’s camera at the QR code on the MFA screen. The app will scan the QR code and automatically add a code to your app.

Note: These screenshots are from iOS. Android users may see a slightly different interface.

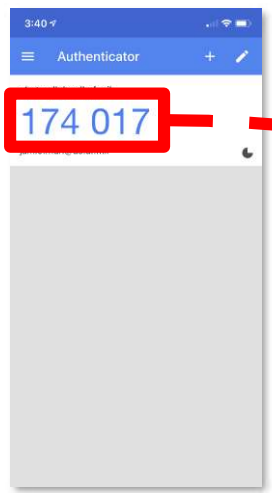

Mattermost Setup

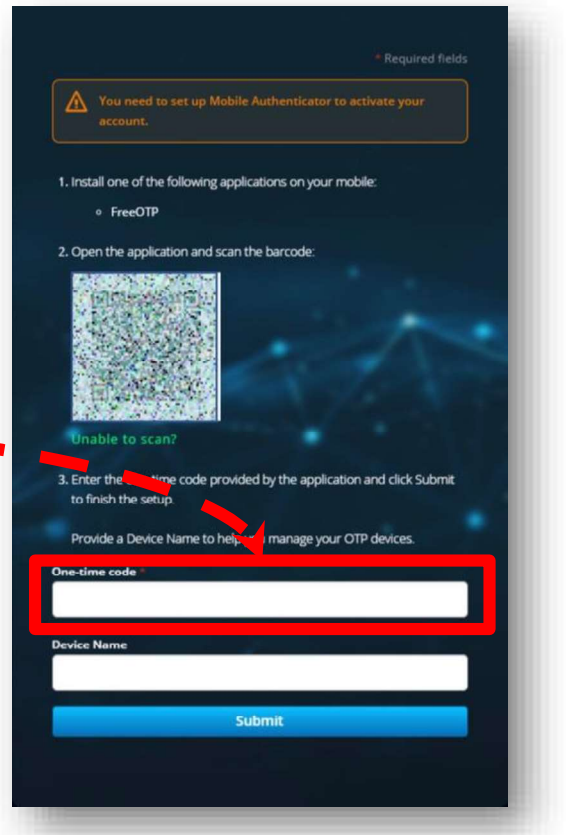

7

Enter the code into the "One-time Code" field and enter a device Name (e.g. Google Auth iPhone) then click "Submit".

Note: Each time you log in from a new location, you will be asked for the MFA code which changes every 30 seconds.

Note: If your MFA pin is not accepted or entered incorrectly, the QR code is reset so you will need to scan it again which will create a new MFA 6-digit pin.

DO NOT DELETE the Authenticator App

- Do NOT delete the authenticator app. You will need to use that app every time you login.
- You will be required to re-login every day on computers and every 3 days on mobile devices.
  - This is due to the classification level of the system and the absence of CAC requirements. We understand it is not ideal however we must protect our information.
